

Mobile Test Automation

Record Once, Test Anywhere!!!

Earlier this year we made mAutomate available to QA Engineers and Quality analysts to experience a flawless and seamless automated mobile testing. We thank you for your overwhelming response.

mAutomate – “Record Once - Test Anywhere!!!” is one of the most powerful, innovative and cost-effective frameworks for testing mobile apps across diverse handsets, carrier environments, operating system versions, and geographies.

[Introducing mAutomate](#)

A web based solution to manage your applications Test Cases, Devices, Releases,

Versions and Iterations that tests all type of mobile apps including native, hybrid and browser based apps.

Allows you to create and manage your own device cloud with minimal effort. No jailbreaking or emulation, test on real devices when you want. mAutomate's comprehensive dashboard provides you real time visibility into the test progress and results.

mAutomate BENEFITS
Presents mAutomate benefits

FEATURE OFFERINGS
Lists all the features

P1 / EXECUTION

Asynchronously execute Tests on remote devices at high velocity.

P2 / PERFORMANCE

Provide performance comparison across devices in different networks.

P3 / REPORTING

Report on quality and responsiveness of your mobile apps.

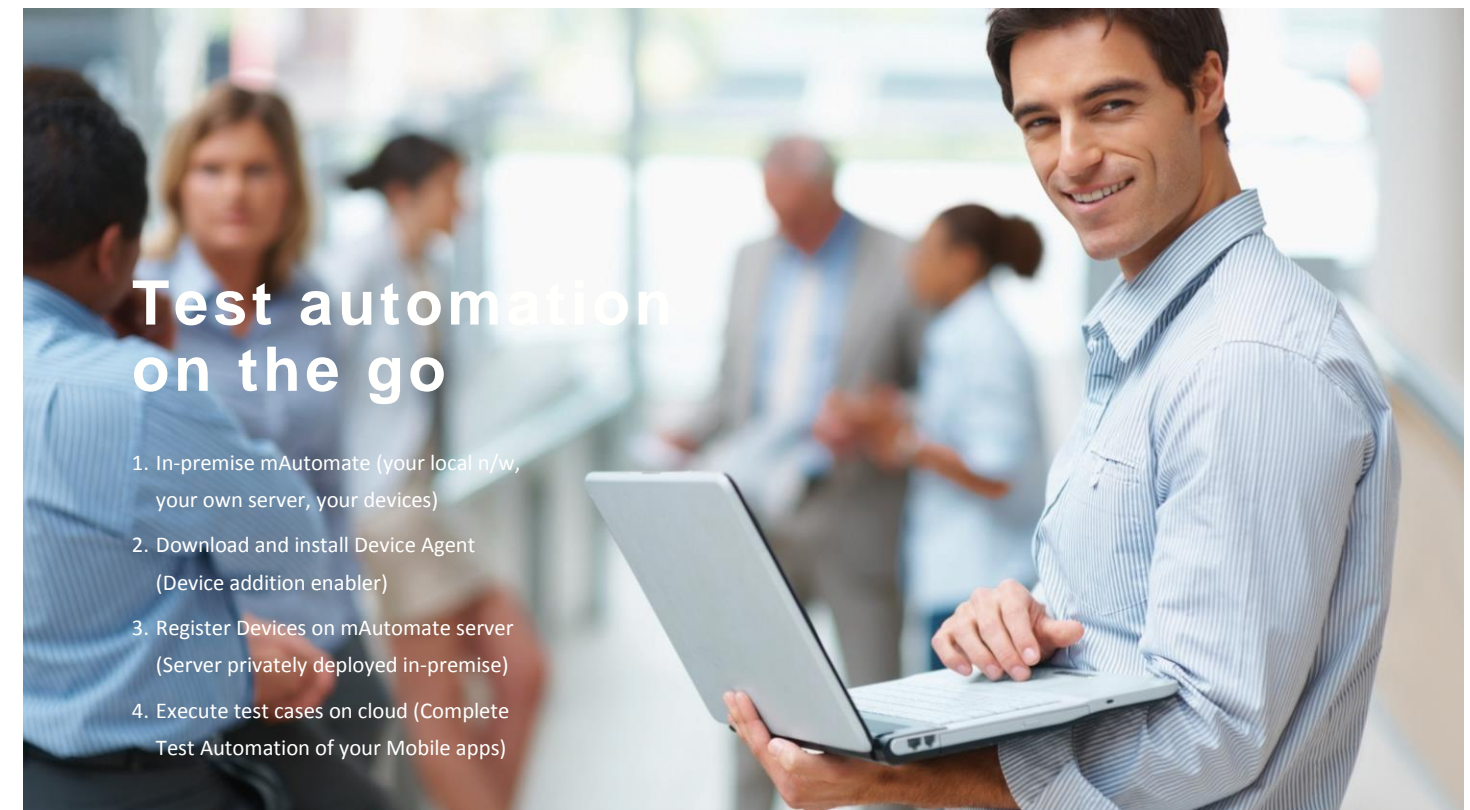

P4 / SHARE DEVICES

Eliminate human error, perform same operation with every iteration.

mAutomate

Record Once – Test Anywhere!!!

Test automation on the go

1. In-premise mAutomate (your local n/w, your own server, your devices)
2. Download and install Device Agent (Device addition enabler)
3. Register Devices on mAutomate server (Server privately deployed in-premise)
4. Execute test cases on cloud (Complete Test Automation of your Mobile apps)

Now choose cloud or in-premise, mAutomate, your way!

Depending upon your preferences, both a full-fledged in-house setup within your network and with your own devices or a fully hosted solution are appropriate.

Want access to all the latest and diverse devices globally across myriad of carrier environments, cloud can be your first choice and rational preference.

On the other hand, in-premise setup allows to access devices instantly and require sharing amongst your internal teams only.

Also, factors like Total cost of ownership

(TCO), CapEx and OpEx differ as per the requirement and environment preference.
